

Make AI your
friend

Here's a 5-step model that will help you create your first digital product today:

1. Choose a Topic and Format

Example:

Topic: "Social Media Growth with AI"

Format: PDF guide or prompt pack

2. Ask ChatGPT for an Outline and Content

For example: "Create an outline for an e-book on topic X" or "Write a 500-word introduction on topic X."

3. Edit the Text and Verify Facts

Check important facts using Google or reliable sources, and format the text in your own style.

4. Create the Design in Canva or Google Docs

You can use ready-made e-book or guide templates. Finally, export as a PDF.

5. Publish and Sell

Create an account on Whop or Gumroad. Add your product description, cover, and set a price (9–29 \$). Share it on social media or run a small campaign.

Chapter 1: Introduction – Why AI Can Open Doors Without a Technical Background

Imagine having an AI that works as your personal assistant, writing texts for you, brainstorming product ideas, generating images, helping you earn money online, and operating 24/7 without getting tired. This is no longer science fiction. It's happening right now.

In 2025, AI is not just a tool for engineers; it's a tool for creatives, marketers, freelancers, entrepreneurs, and anyone, regardless of background or education. AI is like the new electricity: it doesn't solve everything on its own, but it makes many things easier, faster, and cheaper.

So, what can you really do with AI?

Many people believe that using AI requires coding skills or deep technical understanding. This is not true. With the right tools and a little creativity, you can now:

- Sell digital products created with AI
- Build side income, even if you've never tried anything online
- Become a more productive and efficient worker or entrepreneur
- Earn money as a content creator, prompt designer, bot operator, or AI consultant

In this book, we will go through practical, beginner-friendly ways you can leverage AI to make money without needing technical knowledge, a business, or a huge budget. You'll find examples, tools, and even ready-made models that you can try out immediately.

The goal of this book

No fluff, no technical jargon. This book is made for doing.

The goal is simple:

- 💡 Help you earn your first euros or hundreds with AI – as quickly and simply as possible.

Whether you're a student, a part-timer, a stay-at-home parent, or someone looking to try something new, this guide is for you.

Let's take AI and make it work for us – without pressure but full of possibilities

Chapter 2: 10 Ways to Earn with AI

In this chapter, we will go over ten different ways to make money using AI. Each one is beginner-friendly and doesn't require any coding skills – just a willingness to try and a bit of time.

1. Sell an AI-Generated E-book or Guide

You can create guides on topics like productivity, social media marketing, or "ChatGPT for Beginners." AI can help you from ideation to writing and even designing covers.

2. Create and Sell Prompt Packs

Make collections of ready-to-use ChatGPT prompts for specific audiences, such as freelancers, entrepreneurs, students, or people with ADHD. Package them into a PDF and sell them on platforms like Whop.

3. Start a Paid Newsletter or Blog on AI

You can curate news, tools, and tips related to AI and earn money through ads or paid subscriptions (using platforms like Substack, Beehiiv, or Medium).

4. Create Digital Products with Canva and AI Image Generators

Sell planner/journal packs, educational materials, printable designs, or digital cards. Use tools like Midjourney, DALL·E, or Canva AI for illustrations.

5. Offer Freelance AI Content Creation

Sell blog posts, newsletters, or social media copy created with AI. You can sell this service on platforms like Fiverr or LinkedIn.

6. Create an Online Course or Workshop with AI Assistance

Create a course on something you're knowledgeable about. AI can assist in designing the course, creating content, and even generating visuals.

7. Use AI for Social Media Growth and Sell the Service

Offer a service where you produce post ideas and copy for Instagram, TikTok, or X. AI generates the content – you monetize it.

8. Build and Sell an AI Toolkit for Specific Audiences

Create a PDF or Notion-based "AI Toolkit" for entrepreneurs, teachers, or students. Include tools, prompts, and usage instructions.

9. Develop a Niche AI Helper or Bot

Build simple Notion or Google Sheets tools that use AI for content creation, project management, or planning.

10. Affiliate Marketing for AI Products

Promote AI tools or courses and earn a commission. Use platforms like Gumroad, Systeme.io, or Digistore to promote products.

Chapter 3: How to Choose the Right Method for You

There are **MANY** ways to make money with AI

Here are a few questions that can help guide your choice:

 1. What topics are you passionate about?

Don't pick a method just because it has the potential to make money. If creating AI-generated images bores you after a day, it won't become a sustainable business.

 2. How much time do you have?

If you only have half an hour in the evenings, start small: create a prompt pack or a short e-book. If you have more time, you can build a blog or a course.

x 3. Do you want to be "visible" or stay behind the scenes?

If you prefer to stay low-key, sell PDF products. If you enjoy being in front of the camera, create videos, personal content, or courses.

4. Which tools feel comfortable to you?

If you're familiar with Notion, use it. If Canva is your strength, design with that. Leverage your strengths – don't start from scratch if you don't have to.

The most important thing is to start somewhere, learn quickly, and test – this is not a one-size-fits-all approach, but rather an ongoing learning journey

Chapter 4: AI Tools Explained – What to Use and Where

tool	use case	price
ChatGPT	Free / Plus (20 \$/mo)	Free / Plus (20 \$/mo)
Canva AI	Visual design, images, PDFs	Free / Pro (12 \$/mo)
DALL-E/ Midjourney	Image generation, AI graphics	DALL-E Free / MJ Paid
Notion AI	Notes, planning, internal use	Free / Paid Plans
OpusClip, Descript, Veed.io	Video creation and editing	Mostly freemium
Gumroad / Whop	Selling digital products	Free / Commission-based

Chapter 5: How to Build a Simple AI Product

Here's a 5-step model that will help you create your first digital product today:

1. Choose a Topic and Format

Example:

- Topic: "Social Media Growth with AI"
- Format: PDF guide or prompt pack

2. Ask ChatGPT for an Outline and Content

For example: "Create an outline for an e-book on topic X" or "Write a 500-word introduction on topic X."

3. Edit the Text and Verify Facts

Check important facts using Google or reliable sources, and format the text in your own style.

4. Create the Design in Canva or Google Docs

You can use ready-made e-book or guide templates.

Finally, export as a PDF.

5. Publish and Sell

Create an account on Whop or Gumroad. Add your product description, cover, and set a price (9–29 \$).

Share it on social media or run a small campaign.
