

CloudForge Kits — Terms of Service

Last updated

September 10, 2026

1. Digital Products

CloudForge Kits sells digital software templates, starter projects, infrastructure configurations, documentation, and related digital materials. The AWS Cloud Infrastructure Starter Kit is a downloadable starter/template project intended to help users create and deploy AWS-hosted applications.

2. Your Responsibilities

You are responsible for your own AWS account, AWS and third-party costs, credentials, configuration, security, testing, and compliance. CloudForge Kits does not provide AWS accounts, credentials, hosting, managed infrastructure, or ongoing operation of your AWS environment.

3. License

You receive a non-exclusive, non-transferable license to use, modify, and incorporate the purchased materials into your own personal or commercial projects.

4. Restrictions

You may not resell the original product or substantially unchanged copies, redistribute the ZIP as a standalone product, publicly upload the original files for redistribution, share purchase/download access with unauthorized users, or claim the original CloudForge Kits materials as your own.

5. No Credentials Included

AWS passwords, access keys, API keys, private keys, and other personal credentials are not intentionally included. Keep your credentials secure and never commit secrets to public repositories.

6. Compatibility

AWS services, Terraform providers, GitHub Actions, dependencies, and third-party services may change. CloudForge Kits does not guarantee compatibility with every environment or future version.

7. No Managed Service

The purchase provides access to the digital product only and does not create a consulting, hosting, maintenance, or managed-services relationship.

8. Intellectual Property

CloudForge Kits retains ownership of its original product, documentation, branding, and materials, subject to third-party licenses.

9. Support

Reasonable support may be provided for product access and included materials. Support does not guarantee custom development, deployment, AWS debugging, or compatibility work.

10. Disclaimer

The product is a starter/template resource. You are responsible for reviewing, testing, securing, and adapting it before production use. CloudForge Kits is not responsible for AWS charges, downtime, data loss, security incidents, configuration errors, or consequences of deployment or modification.

11. Limitation of Liability

To the maximum extent permitted by applicable law, CloudForge Kits will not be liable for indirect, incidental, special, consequential, or punitive damages. Nothing excludes liability that cannot legally be excluded.

12. Changes

We may update these Terms from time to time. The latest version will be made available through CloudForge Kits or Whop.
