7. Comprehensive Risk Disclosure/Disclaimer

Government Required Risk Disclaimer and Disclosure Statement:

CFTC RULE 4.41 - HYPOTHETICAL OR SIMULATED PERFORMANCE RESULTS HAVE CERTAIN LIMITATIONS. UNLIKE AN ACTUAL PERFORMANCE RECORD, SIMULATED RESULTS DO NOT REPRESENT ACTUAL TRADING. ALSO, SINCE THE TRADES HAVE NOT BEEN EXECUTED, THE RESULTS MAY HAVE UNDER-OR-OVER COMPENSATED FOR THE IMPACT, IF ANY, OF CERTAIN MARKET FACTORS, SUCH AS LACK OF LIQUIDITY. SIMULATED TRADING PROGRAMS IN GENERAL ARE ALSO SUBJECT TO THE FACT THAT THEY ARE DESIGNED WITH THE BENEFIT OF HINDSIGHT. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFIT OR LOSSES SIMILAR TO THOSE SHOWN.

Trading performance displayed herein is hypothetical. Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. One of the limitations of

hypothetical performance trading results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual trading results.

U.S. Government Required Disclaimer - Commodity Futures Trading Commission:

Futures and Options trading has large potential rewards, but also large potential risk. You must be aware of the risks and be willing to accept them in order to invest in the futures and options markets. Don't trade with money you can't afford to lose. This is neither a solicitation nor an offer to Buy/Sell futures or options. No representation is being made that any account will or is likely to achieve profits or losses similar to those discussed. The past performance of any trading system or methodology is not necessarily indicative of future results.

Trade at your own risk. The information provided here is of the nature of a general comment only and neither purports nor intends to be specific trading advice. It has been prepared without regard to any particular person's investment objectives, financial situation, and particular needs. Information should not be considered as an offer or enticement to buy, sell or trade. You should seek appropriate advice from your broker, or licensed investment advisor, before taking any action. Past performance does not guarantee future results. Simulated performance results contain inherent limitations. Unlike actual performance records, the results may under- or over-compensate for factors such as lack of liquidity. No representation is being made that any account will or is likely to achieve profits or losses to those shown. The risk of loss in trading can be substantial. You should, therefore, carefully consider whether such trading is suitable for you in light of your financial condition.

Risk Disclosure Notice:

The National Futures Association (NFA) and CFTC (Commodity Futures Trading Commission), the regulatory agencies for the forex and futures market in the United States, require that customers be informed about potential risks in the forex market. If you don't understand any of the information provided on this page, please contact us or seek advice from an independent financial advisor

Risk Associated with Forex Trading:

Off-exchange foreign currency trading on margin carries a high level of risk and may not be suitable for all investors. The high degree of leverage can work against you as well as for you. Before deciding to invest in foreign exchange, you should carefully consider your investment objectives, level of experience, and risk appetite.

The possibility exists that you could sustain a loss of some or all of your initial investment, and, therefore, you should not invest money that you cannot afford to lose. You should be aware of all the risks associated with off-exchange foreign currency trading and seek advice from an independent financial advisor if you have any doubts.

Cryptocurrency Trading Risks:

Cryptocurrency trading involves extreme volatility, regulatory uncertainty, and potential total loss. Digital assets are largely unregulated and may be subject to sudden market shifts, hacking, or regulatory actions (e.g., bans, restrictions). Crypto futures, options, and margin trading carry additional leverage risks. Cryptocurrency exchanges and wallets may be vulnerable to cyber attacks, fraud, or operational failures. Stablecoins may lose their peg. Past performance is not indicative of future results. Crypto platforms are not FDIC-insured.

AI TradingView Indicator Risks: The proprietary AI (Algorithmic Intelligence) TradingView Indicator is an analytical tool provided for educational and informational purposes only. Its output is based on historical data and algorithms and is not a guarantee of future results. The indicator's performance is subject to market conditions, algorithm limitations, platform errors, and the user's correct interpretation. Any trades or investment decisions made based on the indicator's output are your sole responsibility. MtnSkyAlgo and its operators are not liable for any losses incurred from its use.

Stocks/Equities & Short Selling Risks:

Equities trading carries risks including company-specific events, market volatility, and liquidity constraints. Short selling exposes you to unlimited loss potential if asset prices rise. Penny stocks or low-volume securities may be highly manipulative or illiquid. Always verify broker execution policies. OTC securities may have limited public information. Dividends are not guaranteed and may be cut.

Brokerage & Platform Risks:

Broker insolvency (e.g., SIPC/FDIC limits) may result in loss of funds. Trading platforms may experience outages, delays, or liquidity gaps during high volatility. Margin calls or forced liquidations can occur without notice. Payment for order flow may affect execution quality. Not all orders are routed to public exchanges. International brokers may not offer U.S. investor protections.

Algorithmic & Automated Trading Risks:

Automated trading systems may fail due to technical glitches, latency, or incorrect parameters. Backtested results often overstate live performance. Connectivity issues may prevent order execution. Flash crashes may trigger unintended orders.

AI Indicator Performance Disclaimer

The "Performance" table displayed by the AI (Algorithmic Intelligence) TradingView Indicator (Quantum Flow Scanner), provides approximate output detection statistics calculated using a simplified tracking system and should not be considered accurate representations of real trading results. The metrics do not account for overlapping positions, realistic order execution, slippage, commissions, or proper intrabar price movement sequencing (when both stop loss and take profit levels are reached within the same bar, the system assumes take profit was hit first, which may not reflect actual conditions). These statistics are for educational, entertainment, and analytical purposes only and are not indicative of future results or results achievable in live trading. Trading financial instruments carries significant risk of loss, and past performance (whether actual or simulated) does not guarantee future results. Always conduct thorough independent backtesting and consult with qualified financial professionals before making investment decisions.

The percentage ratings displayed with Bull/Bear labels (e.g., "Bull 75%", "Bear 82%") represent calculated strength scores based on multiple technical factors including volatility, momentum, trend alignment, volume, candle patterns, and price positioning relative to dynamic bands. These percentages are NOT probabilities of success, win rate predictions, profit forecasts, or guarantees of favorable trading outcomes. A higher percentage indicates stronger technical alignment with the indicator's proprietary criteria at the time of output generation but does not correlate directly to trading profitability, risk-reward ratio, or likelihood of the trade being successful. Output strength ratings are subjective analytical metrics derived from weighted algorithmic calculations and should be used only as supplementary information alongside comprehensive market analysis, proper risk management protocols, and individual trading strategy requirements. The rating system incorporates higher timeframe analysis (15-minute timeframe data via request.security) which may cause historical ratings to appear differently than they did in real-time due to possible data repainting as new bars form. No rating percentage, regardless of how high or low, should be interpreted as a recommendation to enter or exit a trade, as financial advice, or as an indicator of expected returns. Users must conduct their own analysis and make independent trading decisions based on their personal risk tolerance and financial situation.

All visual elements of this indicator including dynamic bands, midlines, output markers, background colors, and output conditions are generated through mathematical calculations applied to historical and real-time price data. These visual components are subject to recalculation and may change as new price data becomes available. The indicator's outputs, including but not limited to bear/bulls, band positions, and momentum calculations, are informational tools only and do not constitute investment advice, trading recommendations, or guarantees of market direction or price movement. This indicator does not account for individual financial circumstances, risk tolerance, investment objectives, trading experience level, or capital availability. Users assume full responsibility for all trading decisions made while using this indicator and acknowledge that all trading involves substantial risk of financial loss. No

indicator, system, or methodology can guarantee profits or eliminate the risk of losses in financial markets.

The term "AI" (Algorithmic Intelligence) used in the indicator name refers solely to automated mathematical calculations and technical analysis algorithms, not artificial intelligence, machine learning, or predictive modeling technologies. The indicator does not use neural networks, learn from data, make autonomous decisions, or possess any form of artificial intelligence as commonly understood. All outputs are generated through pre-programmed technical formulas and should not be interpreted as having any predictive capabilities beyond standard technical analysis methods.
